

Steps in **REFLECTIVE ANALYSIS**

1. With a partner, study four samples of student work. These could be 4 samples from one student over time or samples of one kind of assignment from 4 different students.
2. Record information in each of the areas on page 1 of the grid for each sample of work.
3. Discuss with your partner and record your answers to the questions on page 2 of the grid for each sample.
4. What insights did you gain about the student(s) and what steps will you take as a result of this analysis to better meet the needs of the student(s)?
5. Reflect on the experience. Discuss how the process is working. What was effective? What are we learning? What will we do to make our next session successful?
